

## Mahogany

Mahogany is a hardwood prized for its strength and density, leading to a natural resistance to moisture and rot. Its tight interlocking grain structure enhances durability and provides a refined appearance. Similar to teak, over time, left unprotected, mahogany will develop a silver-gray patina while maintaining its structural integrity.

### Polyurethane Finishes

Outdoor Mahogany products are finished in a multi-step polyurethane protective coat, an industry standard designed to protect against harsh weather, UV rays, and moisture. All wood products should be stored in a dry, covered area, or the use of covers is recommended. Damaged finishes may be lightly sanded. To extend the life of your finish, water-based polyurethane sealants may be applied to PU finished products.

### Care & Maintenance

- Clean regularly with mild soap and water using a soft cloth, wiping in the direction of the grain.
- If left uncovered, mahogany will naturally weather to a silver-gray patina.
- Avoid pressure washing and harsh chemicals, as it can damage the surface.
- Avoid extended periods of direct sun or rain to prevent fading and weathering.
- To preserve the original finish, store in a dry area or use protective covers when not in use.
